00 / Overview

Sanity is the editor for the New Work website. Use it to update text, upload media and choose which work appears on the site.

0.1 Sign in.
Open **new-work.sanity.studio** using the email address invited to the workspace. Choose **Website content**.

0.2 Choose what to edit.
Work page controls the homepage: splash, gallery, ticker, reel and BTS.
Projects contains each project's copy, cover and page layout.
Asset library stores individual photos and videos used by Projects.
Contact page, **Footer** and **Brand & navigation** hold the shared details.

0.3 Edit and save.
Open an item and choose the relevant tab. Edit its fields or use **Upload** to replace media. Your edits save automatically as drafts; the website keeps showing the published version.

0.4 Publish and check.
Click **Publish** at the bottom right when ready. Publish each changed Asset, Project and page. The website checks for updates every 15 minutes, then rebuilds. Refresh it after the update; see section 07 for the full steps.

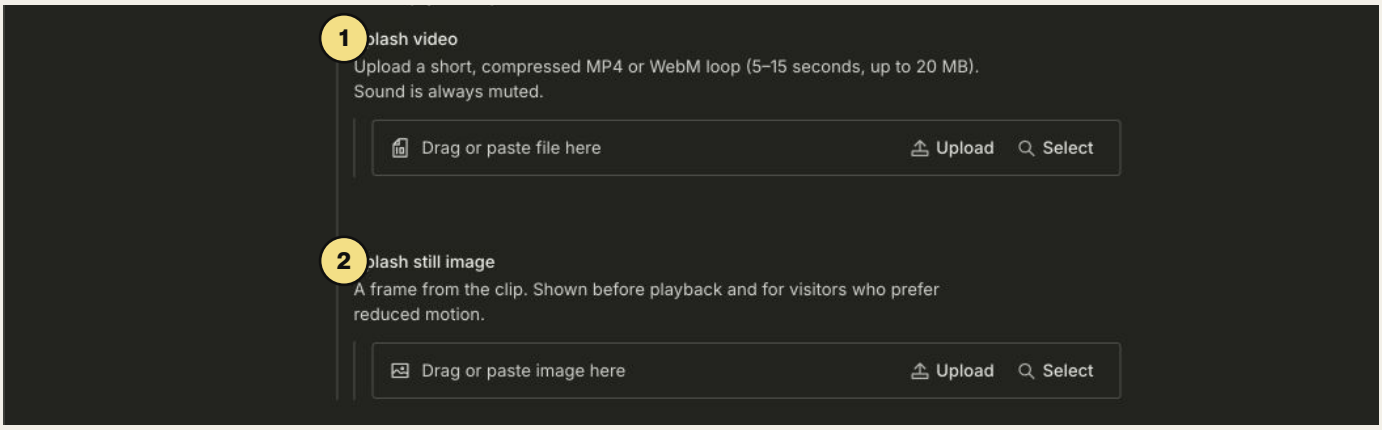

01 / Opening splash

ON YOUR WEBSITE

1.1 Open Work page > Opening splash.

IN SANITY

1.2 Upload both files. Add a **Splash video** (MP4 or WebM, 5-15 seconds, up to 20 MB) and a matching **Splash still image**. The clip loops silently; the still appears while loading and for reduced-motion visitors.

1.3 Publish the Work page. To restore the automatic footage selection, clear both fields and Publish. The separate player below the gallery is edited in section 04.

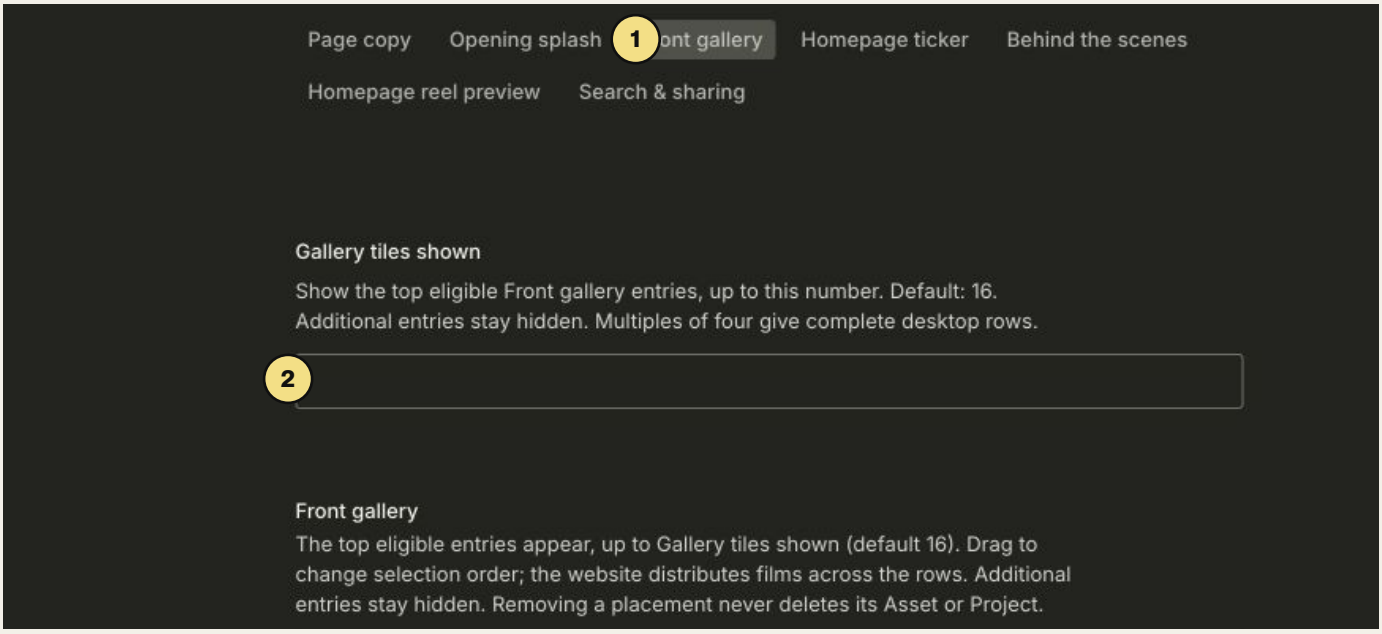

02 / Homepage gallery

ON YOUR WEBSITE

2.1 Open Work page > Front gallery.

IN SANITY

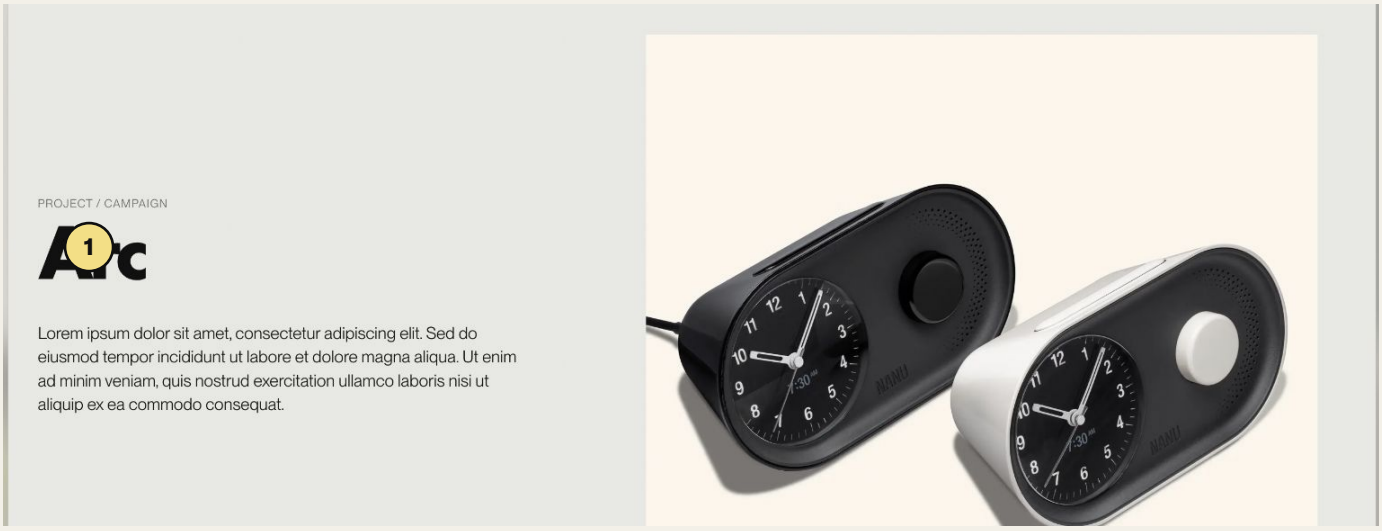

2.2 Set the count. Enter a number in **Gallery tiles shown** (1-40). Leave it blank to use **16**. Multiples of four fill the desktop rows.

2.3 Choose and reorder. In **Front gallery**, change an entry's **Gallery asset** or drag its dotted handle. The top eligible entries appear up to your chosen count; the rest stay hidden. If fewer are available, only those appear. Films are distributed across the rows.

2.4 Publish the Work page. Selected Assets and their Projects must also be published. Use section 03 to add new photos or films.

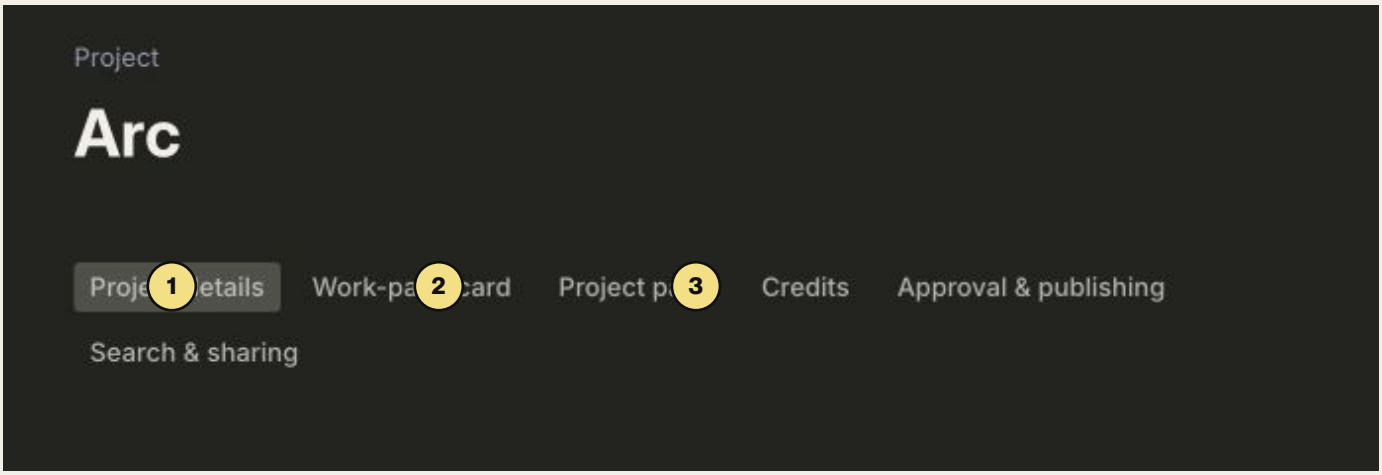

03 / Project pages

ON YOUR WEBSITE

3.1 Edit existing work. Open **Projects > Approved** and choose the matching Project.

IN SANITY

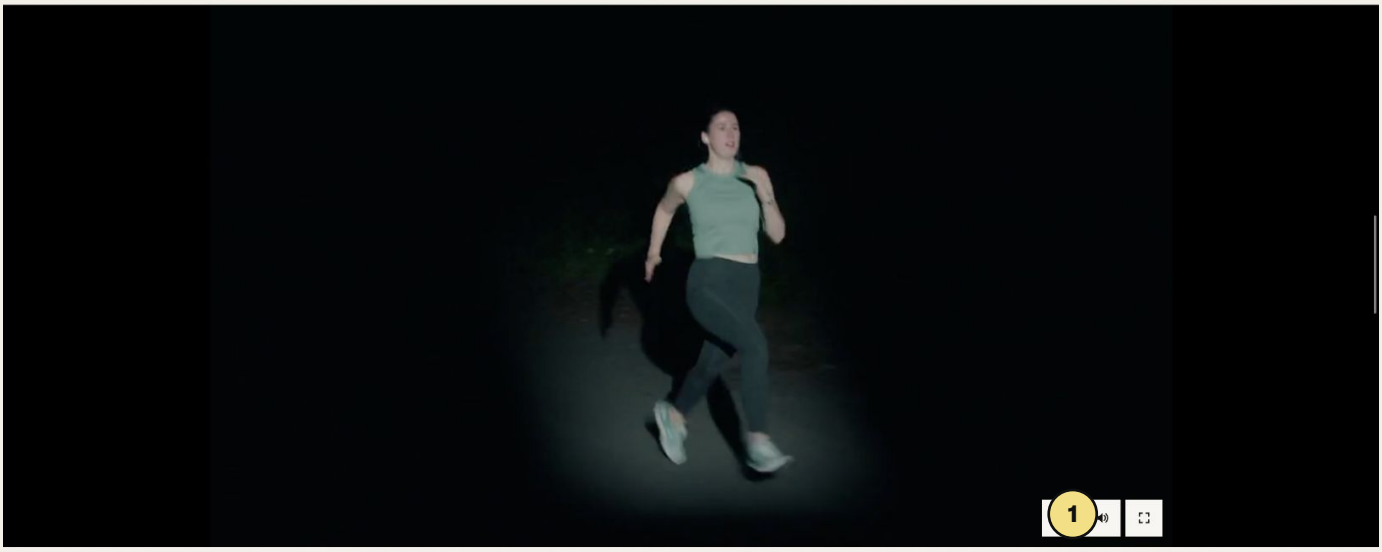

Use **Project details** for copy, **Work-page card** for the cover, and **Project page** for the media sections. Replace individual photos or films in **Asset library > By project**.

3.2 Add new work. Create a Photo, Video or Featured Project. Add its title, URL slug and output types. Create its Assets in **Asset library**; add media, an image description and the Project link, then publish them.

3.3 Finish and approve. Add a cover and at least one media section. Review the copy and credits, select **Approved for website**, then Publish. Select an Asset in **Work page > Front gallery** to feature it on the homepage.

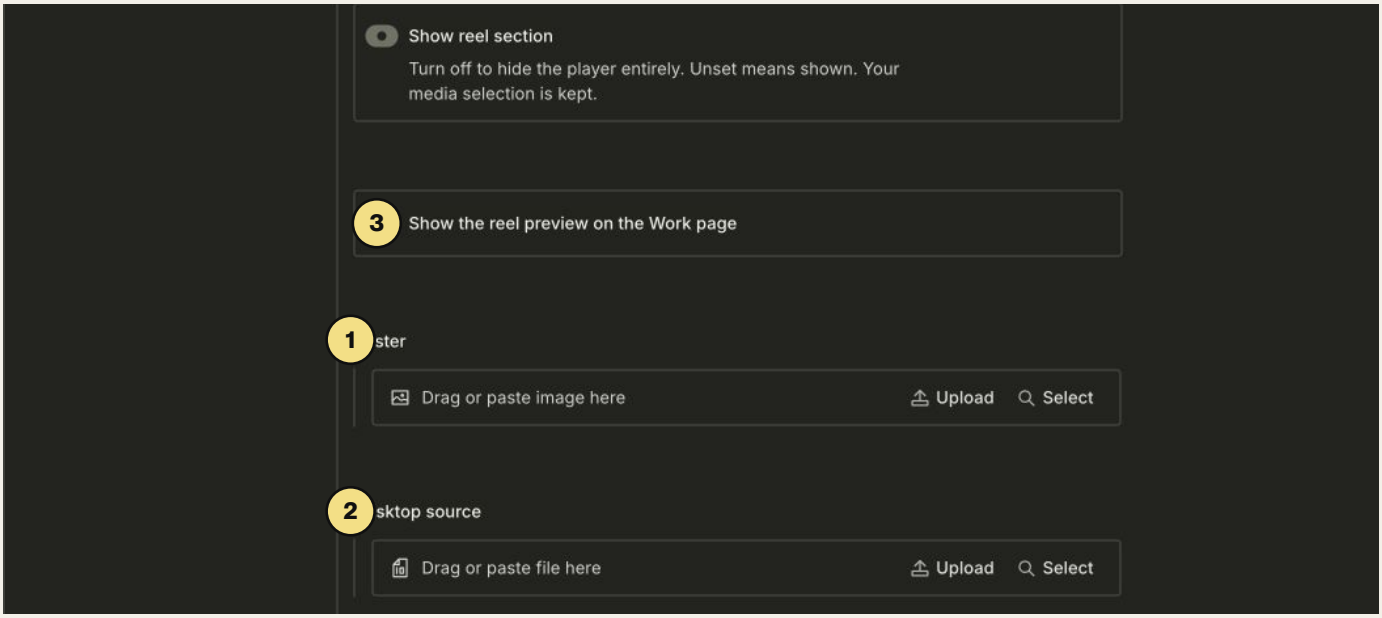

04 / Homepage reel

ON YOUR WEBSITE

4.1 Open Work page > Homepage reel preview.

IN SANITY

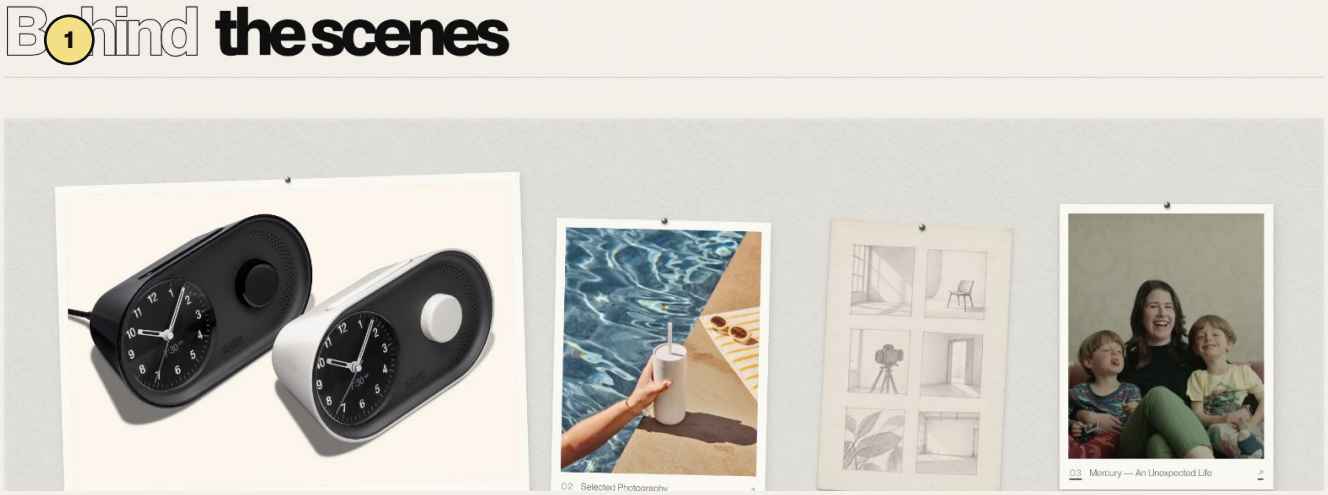

4.2 Upload the media. Add a **Poster** and a short MP4 or WebM preview to **Desktop source**. Add **Mobile source** only if you have a separate mobile cut.

4.3 Enable and Publish. Turn on **Show the reel preview on the Work page**, then Publish. Turning it off restores the project-preview fallback; it does not hide the player.

To hide the player entirely, turn off **Show reel section** and Publish. Your video selection is kept.

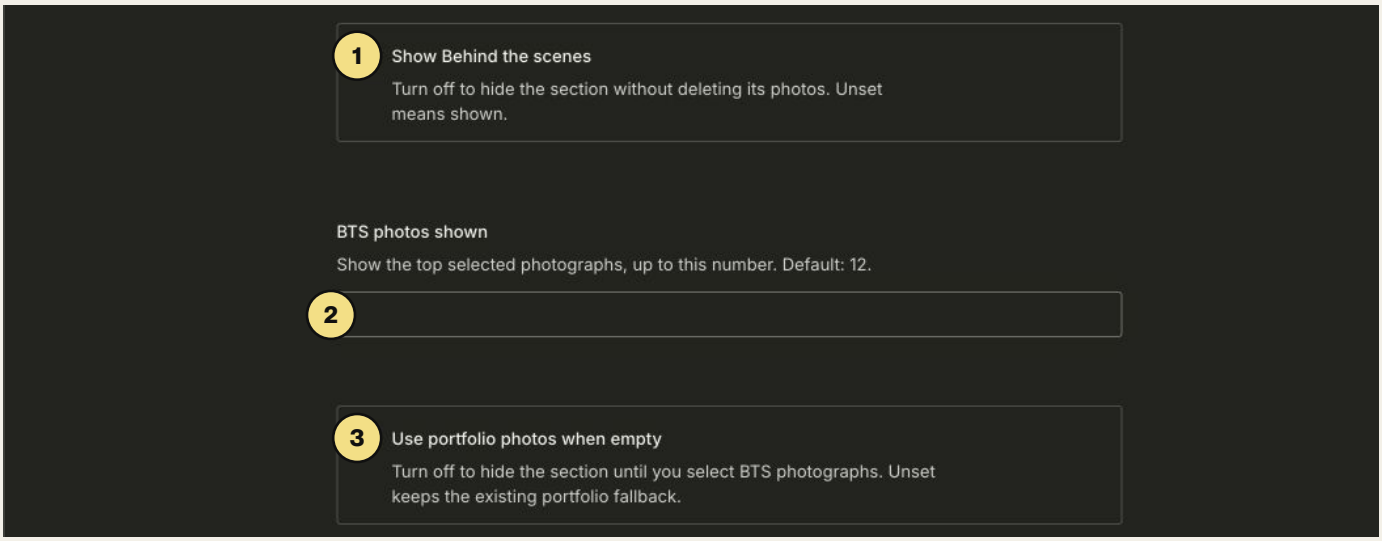

05 / Behind the scenes

ON YOUR WEBSITE

5.1 Open Work page > Behind the scenes.

IN SANITY

5.2 Add your photographs. Upload and publish them in **Asset library**, with an image description and a link to their approved Project. Back here, scroll to **Pinboard photographs** and click **Add item**.

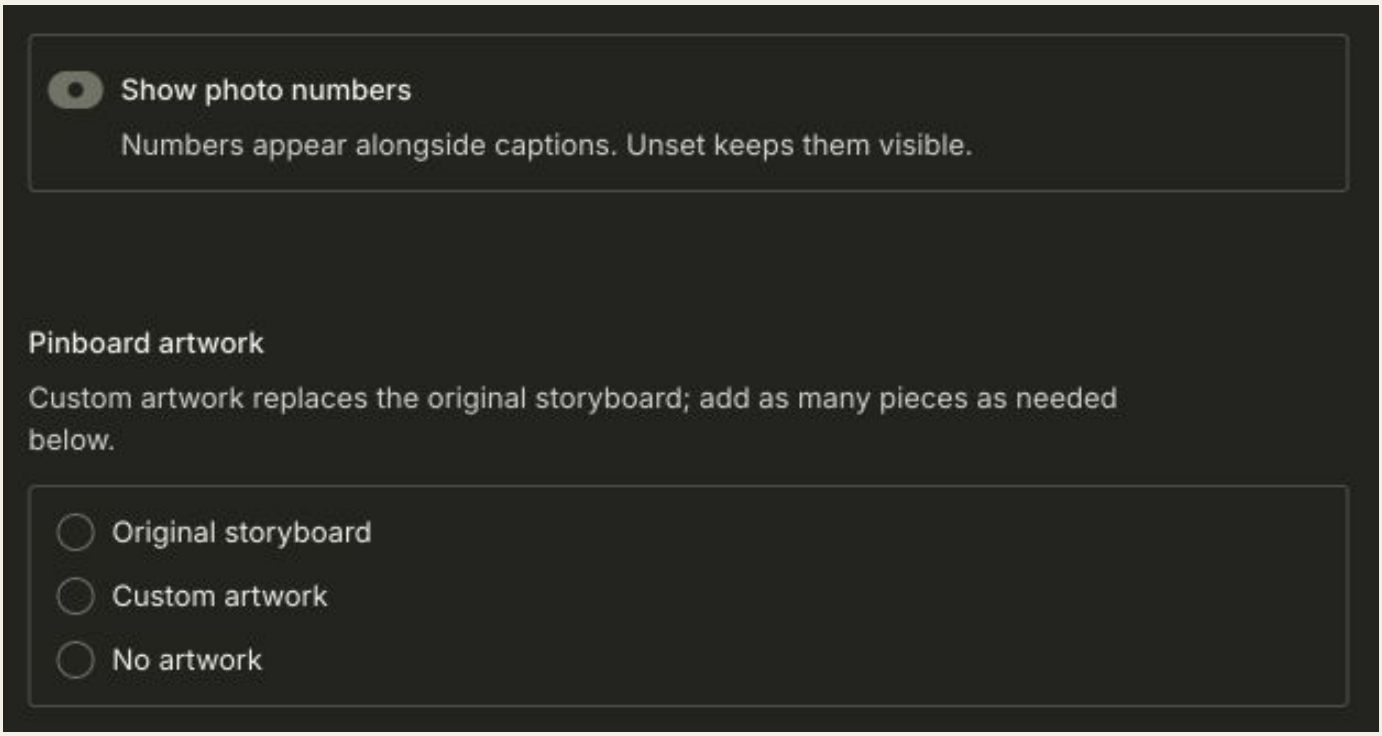

5.3 Set the count and Publish. Set **BTS photos shown** (1-24; blank uses 12). The top selected photos appear up to this count. Drag to reorder, then Publish the Work page.

5.4 Hide or remove placeholders. Turn off **Show Behind the scenes** to hide the section. Turn off **Use portfolio photos when empty** to keep it hidden until you select BTS photos. Publish after either change.

05 / Captions and artwork

5.5 Change photo captions. Open a selected item in **Pinboard photographs** and enter **Photo caption**. Leave it empty to show the Project title. Use **Show photo captions** and **Show photo numbers** to hide labels across the board.

IN SANITY

5.6 Choose your artwork. Keep **Original storyboard**, choose **No artwork**, or select **Custom artwork** to replace it with your own pieces.

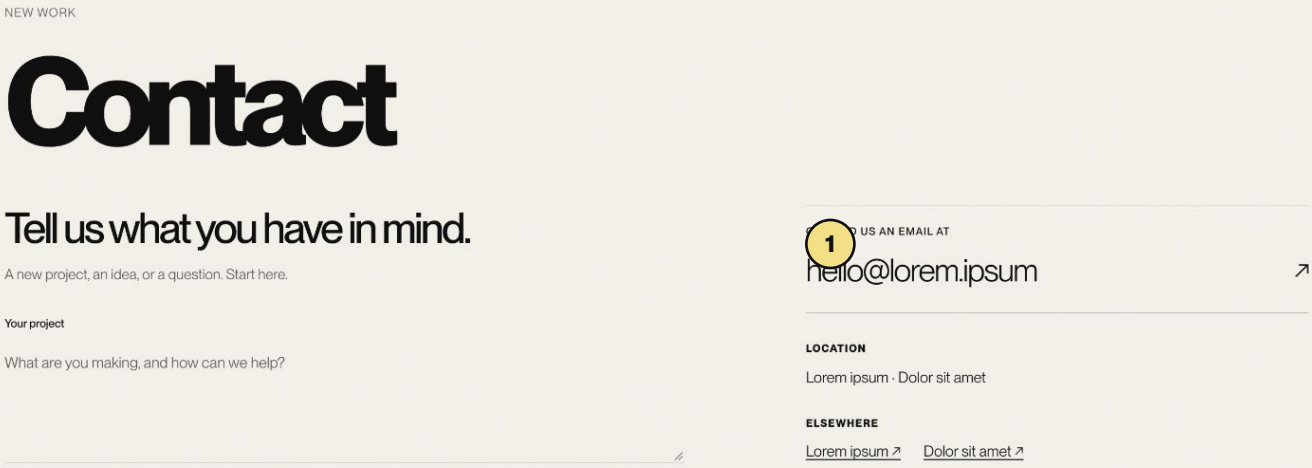

5.7 Add artwork pieces. In **Custom artwork pieces**, click **Add item**, name the piece and upload the image. Transparent PNG or WebP works well. Artwork needs no Project link and does not count toward the photo limit.

5.8 Position each piece. Set **Place after photo**: 0 means before the first; a number beyond the photo count places it at the end. Choose **Size** and **Tilt**. Drag pieces to order those sharing a position, or use **Hide artwork** to save a piece for later. Publish the Work page.

Photos and artwork are display-only; clicking them does not open another page.

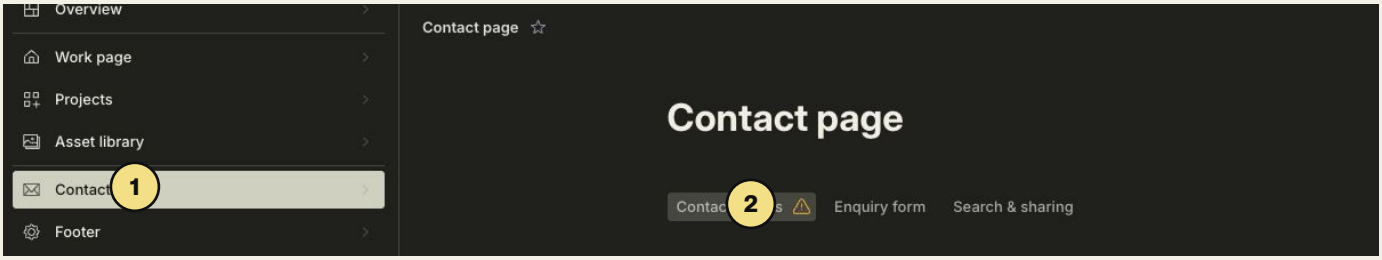

06 / Contact, text and logos

ON YOUR WEBSITE

6.1 Contact details. Open **Contact page > Contact details**. Scroll below Introduction to edit your email, address and social links.

IN SANITY

6.2 Footer text and client logos. Open **Footer > Callout & ticker** for the invitation and messages. In **Client logos**, replace artwork and choose the Project each logo opens. Drag to reorder; use an item menu to remove it. Edit the copyright under **Legal line**.

6.3 Homepage messages. Use **Work page > Homepage ticker** for messages and city clocks. Times update automatically.

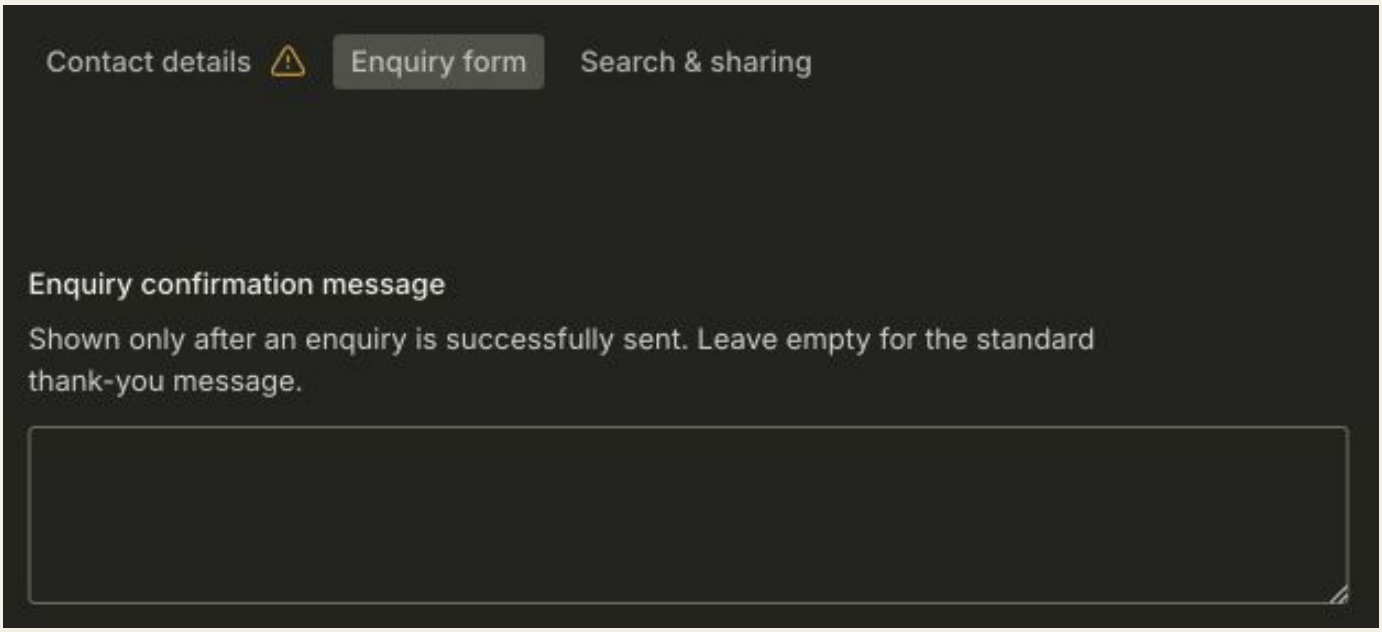

6.4 Brand and header wording. Use **Brand & navigation > Brand** for the logos and Header description. Publish whichever page you changed.

6.5 Homepage search and sharing. Use **Work page > Search & sharing** for the search title, description and sharing image, then Publish. The review website stays excluded from search engines.

06 / Enquiries and navigation

6.6 Change the enquiry confirmation. Open **Contact page > Enquiry form**. Edit **Enquiry confirmation message**, then Publish. It appears only after a successful send. Leave empty for the standard thank-you message.

IN SANITY

6.7 Connect the receiving inbox. In your Formspree account, open **Website enquiries > Integration** and copy its public form endpoint. Paste it into **Formspree form endpoint** below the confirmation message. Manage the receiving inbox and spam settings in Formspree.

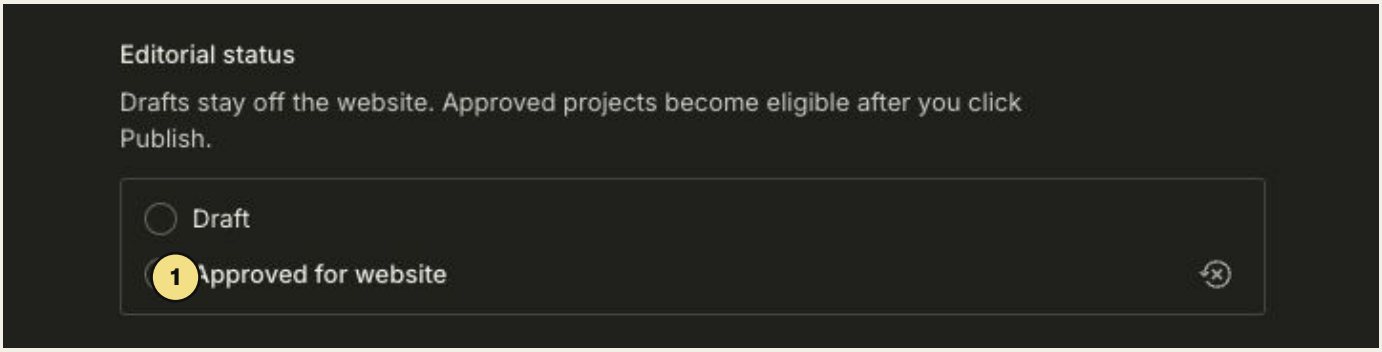

Publish the Contact page, wait for the website update, then send a clearly labelled test and check the receiving inbox. Leaving the endpoint empty switches the website to **Copy enquiry**; no message is sent.

6.8 Update navigation. Open **Brand & navigation > Navigation**. Edit link labels and destinations, drag to reorder, or hide a link. Publish the settings.

6.9 Set site-wide sharing defaults. Use **Brand & navigation > SEO defaults**. Individual page sharing settings take priority when supplied.

07 / Publish and check

7.1 Approve new Projects. Choose **Approved for website** under **Approval & publishing**. Existing approved Projects do not need approving again.

7.2 Click Publish at the bottom right. Publish each changed Asset, Project and selecting page. Sanity will tell you if anything needs completing first.

7.3 Allow time for the update. Published changes are checked every **15 minutes**, then the website rebuilds. Checks may be delayed. **Overview** shows the latest status.

7.4 Refresh the review website.
